

ICAR AIEEA PG 2026 Entomology

- Sericulture and Nematology: heavily weighted, with a large chunk of questions from these two topics
- Apiculture and lac insects: very few questions
- Toxicology and IPM: minimal representation
- Statistics: multiple questions, including numericals
- Pesticide formulations: numerical-based questions
- Virus-vector relationships: only 3-4 questions
- Previous Year Question Papers (PYQs): just 1-2 repeated questions
- Other basic topics: tested conceptually rather than through direct factual questions

GENERAL AGRICULTURE (GA)

- Rice and Fertilizers: featured prominently, similar to previous years' papers
- Mendelian Genetics: repeated from PYQs
- State-specific data: a few questions based on Karnataka and Tamil Nadu
- Current Affairs: not directly asked; instead, questions were based on data from 2021-22

Overall, the paper was easier compared to previous years.
